1. Title – Broken Board: An AI-Driven Narrative Simulation

Broken Board is an interactive, AI-assisted narrative simulation designed to demonstrate everyday systemic inefficiencies faced by ordinary citizens. The project uses storytelling and visual simulation to highlight how corruption, administrative delays, and unequal systems impact individuals.

2. Objective

- To create an interactive narrative experience using AI-assisted tools.
- To simulate real-world systemic inefficiencies in an engaging format.
- To raise awareness about corruption, taxation, and institutional failures.
- To demonstrate how AI can be used for civic engagement and storytelling.

3. Tools Used

- Canva
- Canva AI
- ChatGPT
- Notion

4. Methodology

- Conceptualization of a board-game-style narrative simulation.
- Use of AI tools to generate scenarios, explanations, and narrative flow.
- Design of interactive slides and transitions using Canva.
- Manual iteration and refinement to improve clarity and impact.
- Publishing the final simulation as a web-based experience.

5. Output

The final output is a web-based interactive narrative simulation that guides users through a series of events representing real-world systemic inefficiencies. The project combines visual design, storytelling, and AI-generated explanations.

6. Result

The project successfully demonstrates how AI-assisted tools can be used to create meaningful civic-focused experiences. Users reported increased engagement and a stronger understanding of systemic issues.

7. Conclusion

Broken Board highlights the asymmetry of corruption and systemic failure. While individual losses feel personal and immediate, larger gains elsewhere remain quiet and legal. The project emphasizes awareness through interaction and narrative.
